

click dial

Discover Click & Dial and learn to appreciate dialing comfort

Dial out of Outlook with one Click

Do you use Outlook to organize your contacts?

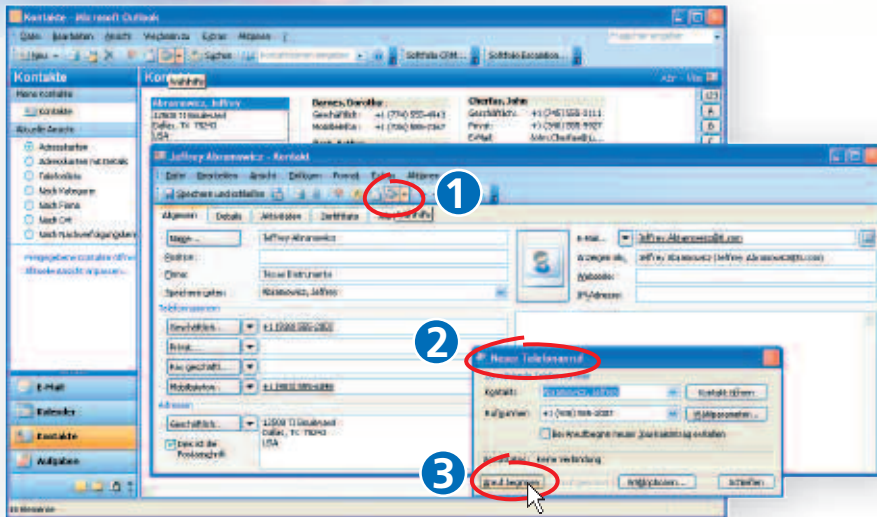

With Click & Dial the phone numbers are dialed directly out of Outlook using a click of your mouse. Therefore you always select the exact phone number that is in the directory.

Advantages

- More flexible
- Individually integrated
- Cost-effective
- Platform independent
- Operating system independent
- PBX system independent

Calling becomes

- Faster
- More user friendly
- Simpler

How to simply use Click & Dial to call out of Outlook

When calling a business partner:

- As usual, you find the contact information in Outlook.
- Using your mouse, click on the telephone button ①
- This opens a separate window "new phone call" ②
- Next, click on "Call" button ③ and the phone call will be made!

System requirements

Telephone Systems:

Requirements for the usage of Click & Dial include a PBX unit with an active CTI-interface.

Other requirements can arise depending on the telephone system in use. These will be cleared on an individual basis.

Server-Operating Systems:

- Windows
- Linux
- Mac OS X
- Solaris
- Other Operating Systems also possible*

Supported PBX Systems

We can support all CTI enabled telephone systems on a per project basis.
